

## How do i set a ~c ban

Contributed by X-Ception

Setting the ~c extended ban is quite different when compared to a normal ban, as it does not make use of the nick!ident@host ban line. As its a channel based ban it uses the prefix:

```
/mode #channel +b ~c:#channel
```

There are a few things to remember with this ban, in the latest version of UnreallRCd you can ban a specific level of users example:

```
/mode #channel +b ~c:+#channel
```

This would keep out voiced users, support for this extension is version dependant however, verify with your server admin if unsure. The second thing to remember is that again it does not work on +vhoaq users and lastly the most important thing to remember is....

It will NOT kick users out of your channel if you have banner a channel they are in, instead if a user is in a banned channel when it becomes banned they will be unable to "speak" in your channel until they parted the banned channel or the ban is lifted.
